**SIDDHARTH INSTITUTE OF ENGINEERING & TECHNOLOGY:: PUTTUR**  
(AUTONOMOUS)

**B.Tech III Year I Semester Supplementary Examinations December-2021**

**THERMAL ENGINEERING**

(Mechanical Engineering)

Time: 3 hours

Max. Marks: 60

**PART-A**

(Answer all the Questions 5 x 2 = 10 Marks)

- |   |   |   |    |    |
|---|---|---|----|----|
| 1 | a | Give example of EC and IC engines                 | L3 | 2M |
|   | b | Enumerate the application of compressed air       | L1 | 2M |
|   | c | Recall meaning of Enthalpy of steam               | L1 | 2M |
|   | d | Classify the various types of nozzles.            | L2 | 2M |
|   | e | Compare the throttle and Nozzle control governing | L5 | 2M |

**PART-B**

(Answer all Five Units 5 x 10 = 50 Marks)

**UNIT-I**

- |   |   |  |    |    |
|---|---|--|----|----|
| 2 | a | Explain any six classifications of Internal Combustion engines.            | L2 | 5M |
|   | b | With a neat sketch, explain any three parts in Internal Combustion engine. | L2 | 5M |

**OR**

- |   |   |  |    |    |
|---|---|--|----|----|
| 3 | a | A two-stroke cycle internal combustion engine has a mean effective pressure of 6 bars. The speed of the engine is 1000 rpm. If the diameter of piston and stroke are 110 mm and 140 mm respectively, find the indicated power developed.   | L4 | 5M |
|   | b | A single cylinder, four stroke cycle oil engine is fitted with a rope brake. The diameter of the brake wheel is 600 mm and the rope diameter is 26 mm. The dead load on the brake is 200 N and the spring balance reads 30 N. If the engine runs at 450 rpm, Discover the brake power of the engine. | L4 | 5M |

**UNIT-II**

- |   |   |  |    |    |
|---|---|--|----|----|
| 4 | a | Explain the working principle of single stage single acting reciprocating air compressor.    | L2 | 5M |
|   | b | Construct the expression for work done single stroke single acting reciprocating compressor. | L3 | 5M |

**OR**

- |   |  |  |    |     |
|---|--|--|----|-----|
| 5 |  | An air compressor takes in air 1 bar and 20 oC and compresses it according to law to $pV^{1.25} = \text{constant}$ . It is then delivered to a receiver at a constant pressure of 10 bar. $R = 0.287 \text{ kJ/kg K}$ . Determine: i). Temperature at the end of compression, ii) Work done, iii) Heat transferred during compression per kg of air. | L4 | 10M |
|---|--|--|----|-----|

**UNIT-III**

- |   |   |  |    |    |
|---|---|--|----|----|
| 6 | a | List out the methods of increasing the thermal efficiency of Ranking cycle.  | L1 | 5M |
|   | b | A simple Rankine cycle works between pressures 28 bar and 0.06 bar, the initial condition of steam being dry saturated. Calculate the cycle efficiency, work ratio and specific steam consumption. | L4 | 5M |

OR

- 7 A steam power plant operates on a theoretical reheat cycle. Steam at boiler at 550°C, 150 bar expands through the high-pressure turbine. It is reheated at a constant pressure of 40 bar to 550°C and expands through the low-pressure turbine to a condenser at 0.1 bar. Draw T-S and h-s diagrams. Find (i) Quality of steam at turbine exhaust (ii) Cycle Efficiency (iii) Steam rate in Kg/ Kw-hr. **L4 10M**

**UNIT-IV**

- 8 Define Steam nozzle and explain about expansion of steam in nozzle with neat sketch. **L2 10M**

OR

- 9 Steam initially dry and saturated is expanded in a nozzle from 15 bars at 300°C to 1.0 bar. If the frictional loss in the nozzle is 12% of the total heat drop calculate the mass of steam discharged when exit diameter of the nozzle is 15 mm. **L4 10M**

**UNIT-V**

- 10 a Explain the working process of impulse turbine **L2 5M**  
b Show the velocity triangle diagram of impulse turbine. **L2 5M**

OR

- 11 The velocity of steam exiting the nozzle of the impulse stage of a turbine is 400 m/s. The blades operate close to the maximum blading efficiency. The nozzle angle is 20%. Considering equiangular blades and neglecting blade friction, calculate for a steam flow 0.6 kg/s, the diagram power and the diagram efficiency. **L4 10M**
