Dear Sir,

Sub: provide Medical leave-Request-Req.

This is to bring to your kind notice that I am here with submitting the application for Medical leave as I have been diagnosed with Ultrasoundography. In this regard, I require seven days of Medical leave from 24-4-2021 to 30-04-21. Hence, I request you to grant me the leave.

Thanking you,

Yours Sincerely,

J. Raju
(J. RAJANI KANTH)

Dear Sir,

Sub: Provide on Duty to attend Conference/
workshop/FDP - Request - Reg.

This is to bring to your kind notice that I
am here with submitting the application for attending
FDP during 21 November to 26 November 2018 on
"Innovation theory and Coding - Applications."
Conducted by Department of Electronics and
Communication Engineering under Electronics & ICT
Academy, NIT Warangal. Hence, I request you to
grant me on duty to attend the FDP.

Thanking you,

Yours Sincerely,

AUTOMATED IRRIGATION SYSTEM IN AGRICULTURE

3. Synopsis of the Research Project Proposal:

- Agriculture plays the major role in economics and survival of people in India. Nowadays Indian agriculture faces a two major problem. They are as follows we know government has promoted a free supply of electricity for farmers to run their motors and pumps for irrigation purpose.
- But it is found that the farmers misusing the electricity to run their home appliances such as radio, TV, fans, etc. This misuse of electricity has brought a considerable problem for government to supply free electricity.
- The main aim of this project is to design low cost Automated Irrigation System using a Wireless Sensor Network and GPRS Module. The Purpose of this project is to provide embedded based system for irrigation to reduce the manual monitoring of the field and get the information in the form of GPRS.
- This proposed system recognizes whether the free electricity has been used other than electric motors for pumping water and if so electricity is being misused, it shuts the total supply for the farmers through a tripping circuit.
- By using wireless networks we can intimate the electricity board about these mal practices. The development of this project at experimental scale within rural areas is presented and the implementation was to demonstrate that the automatic irrigation can be used to reduce water use.

E-METERING

3. Synopsis of the Research Project Proposal:

- The technology of e-metering (Electronic Metering) has gone through rapid technological advancements and there is increased demand for a reliable and efficient Automatic Meter Reading (AMR) system. The proposed system replaces traditional meter reading methods and enables remote access of existing energy meter by the energy provider. Also they can monitor the meter readings regularly without the person visiting each house.
- A GSM based wireless communication module is integrated with electronic energy meter of each entity to have remote access over the usage of electricity. A PC with a GSM receiver at the other end, which contains the database acts as the billing point. Live meter reading from the GSM enabled energy meter is sent back to this billing point periodically and these details are updated in a central database.

NodeMCU with an optocoupler

3. Synopsis of the Research Project Proposal:

- We connected our Node MCU with an opto coupler based relay and programmed it with Blynk code. Actually, it's very simple and no programming knowledge is required.
- We can create our own applets and connect them with the available services. We will create a trigger and then connect it to an action to perform our specific task. In our case, the trigger service will be 'Google Assistant' and the Action will be 'WebHooks'.

4. Financial Details:

S.No.	Major Components	Amount per unit (Rs)	No. of quantity required	Total cost (Rs)
1	Node mcu	2500/-	1	35000/-
2	Leds	5000/-	1	
3	Relay ,transformer	25000/-	1	
4	7805 voltage regulator	2500/-	1

ROBOTICS

3. Synopsis of the Research Project Proposal:

- Alive human body detection system proposed a monitoring system using ultrasonic sensors and camera to record, transmit and analyze conditions of human body. The task of identify human being in rescue operations is difficult for the robotic agent but it is simple for the human agent. In order to detect a human body, an autonomous robot must be equipped with a specific set of sensors that provide information about the presence of a person in the environment around. This work describes a autonomous robot for rescue operations.
- The detection depending on a number of factors such as the body position and the light intensity of the scene. Results show that the system provides an efficient way to track human motion. The aim of this article is to present our experience with various sensors designed and developed.

Fuzzy controlled TCSC

3. Synopsis of the Research Project Proposal:

- In order to improve the Transient Stability margin further series FACTS device has been implemented. A fuzzy controlled Thyristor Controlled Series Compensation (TCSC) device has been used here and the results highlight the effectiveness of the application of a TCSC in improving the transient stability of a power system. In this project, Trajectory sensitivity analysis (TSA) has been used to measure the transient stability condition of the system.
- The TCSC is modeled by a variable capacitor, the value of which changes with the firing angle. It is shown that TSA can be used in the design of the controller.
- The optimal locations of the TCSC-controller for different fault conditions can also be identified with the help of TSA. The paper depicts the advantage of the use of TCSC with a fuzzy controller over fixed capacitor operation.
