

**SIDDHARTH INSTITUTE OF ENGINEERING & TECHNOLOGY:: PUTTUR**  
(AUTONOMOUS)

B.Tech. II Year II Semester Supplementary Examinations December-2025

**HYDRAULICS & HYDRAULIC MACHINERY**

(Civil Engineering)

**Time: 3 Hours**

**Max. Marks: 70**

**PART-A**

(Answer all the Questions 10 x 2 = 20 Marks)

- |     |  |     |    |    |
|-----|--|-----|----|----|
| 1 a | What is the aim of Reynolds experiment.  | CO1 | L1 | 2M |
| b   | State Stoke's law.   | CO1 | L1 | 2M |
| c   | Differentiate uniform flow and non uniform flow.   | CO2 | L1 | 2M |
| d   | What is open channel flow? Give example.   | CO2 | L1 | 2M |
| e   | Calculate critical depth of a rectangular channel having discharge per unit width is 3 cumec/s/m.  | CO3 | L2 | 2M |
| f   | Enumerate hydraulic jump, height of the jump.  | CO3 | L2 | 2M |
| g   | Define turbine.  | CO4 | L1 | 2M |
| h   | Calculate the force exerted by the jet on a stationary flat plate held normal to the jet having area of 2 sq.m with a velocity of 3 m/s. | CO5 | L1 | 2M |
| i   | Define specific speed of a pump.   | CO6 | L1 | 2M |
| j   | Define multistage centrifugal pump.  | CO6 | L2 | 2M |

**PART-B**

(Answer all Five Units 5 x 10 = 50 Marks)

**UNIT-I**

- |   |   |     |    |     |
|---|---|-----|----|-----|
| 2 | Derive Navier – Stokes equations of motion. | CO1 | L4 | 10M |
|---|---|-----|----|-----|

**OR**

- |     |   |     |    |    |
|-----|---|-----|----|----|
| 3 a | List out the characteristics of laminar flow and give examples for laminar flow.  | CO1 | L1 | 5M |
| b   | Oil of absolute viscosity 1.5 poise and density 848.3 kg/m <sup>3</sup> flow through a 30 cm-diameter pipe. If the head loss in 3000 m length of a pipe is 20 m. Assuming laminar flow, determine the velocity, Reynolds number and friction factor | CO1 | L2 | 5M |

**UNIT-II**

- |     |  |     |    |    |
|-----|--|-----|----|----|
| 4 a | Derive the conditions to be most economical trapezoidal channel section  | CO2 | L2 | 5M |
| b   | Design an earthen trapezoidal channel for water having a velocity of 0.6 m/s, side slope of the channel is 1:1.5 and quantity of water flowing is 3 cumec. Assume C as 65. | CO2 | L3 | 5M |

**OR**

- |     |  |     |    |    |
|-----|--|-----|----|----|
| 5 a | Define and state the formulae of Energy and momentum Correction factors.             | CO2 | L2 | 5M |
| b   | Define the following terms: Hydraulic radius, Wetted perimeter and Slope of the bed. | CO2 | L1 | 5M |

**UNIT-III**

- |     |   |     |    |    |
|-----|---|-----|----|----|
| 6 a | In a rectangular channel of width 24 m and depth of flow 6 m, the rate of flow of water is 86.4 m <sup>3</sup> /s. If the bed slope of the channel is 1 in 4000, find the slope of the free water surface. Take C = 60. | CO3 | L3 | 5M |
| b   | Explain back water curve and afflux with a neat sketch.   | CO3 | L2 | 5M |

**OR**

- |     |  |     |    |    |
|-----|--|-----|----|----|
| 7 a | Define specific force, specific depth and critical depth.  | CO4 | L1 | 5M |
| b   | In a rectangular channel of 0.5 m width, a hydraulic jump occurs at a point where depth of water flow is 0.15 m and Froude number is 2.5. Determine specific energy, critical and subsequent depths, loss of head and Energy dissipated. | CO4 | L4 | 5M |

**UNIT-IV**

- |     |   |     |    |    |
|-----|---|-----|----|----|
| 8 a | List out various design aspects of Pelton Wheel   | CO5 | L2 | 5M |
| b   | A Pelton wheel is to be designed for the following specifications: Power = 9560 kW, Head = 350 m, Speed = 750 rpm, Overall efficiency = 85%, Jet diameter not to exceed 1/6 th of the wheel diameter. Determine wheel diameter, diameter of the jet and number of jets required. Take coefficient of velocity as 0.985 and speed ratio as 0.45. | CO5 | L2 | 5M |

**OR**

- |     |   |     |    |    |
|-----|---|-----|----|----|
| 9 a | Explain characteristics curves of a turbine with a neat sketch. | CO5 | L3 | 5M |
| b   | Define cavitation and explain its causes and its effect.        | CO5 | L1 | 5M |

**UNIT-V**

- |      |  |     |    |    |
|------|--|-----|----|----|
| 10 a | Explain work done by the centrifugal pump with a neat sketch   | CO6 | L2 | 5M |
| b    | The impeller of a centrifugal pump having external and internal diameters 500 mm and 250 mm respectively, width at outlet 50 mm and running at 1200 rpm works against a head of 48 m. The velocity of flow through the impeller is constant and equal to 3.0 m/s. The vanes are set back at an angle of 40 degrees at outlet. Determine inlet vane angle, work done by the impeller on water per second and manometric efficiency. | CO6 | L4 | 5M |

**OR**

- |      |   |     |    |    |
|------|---|-----|----|----|
| 11 a | Derive an expression for minimum starting speed of a centrifugal pump   | CO6 | L2 | 5M |
| b    | A centrifugal pump impeller has diameters at inlet and outlet as 360 mm and 720 mm respectively. The flow velocity at outlet is 2.4 m/s and the vanes are set back at an angle of 45 degrees at the outlet. If the manometric efficiency is 70 percent, calculate the minimum starting speed of the pump. | CO6 | L4 | 5M |
